Product Overview

Mini-Circuits ZVE-2W-272+ is an unconditionally stable Balanced Class-A amplifier. This ruggedized High Power Amplifier is capable of delivering 2W output signals across the entire operating bandwidth, from 700 MHz to 2700 MHz. Extensive safety features enable this amplifier to survive full reflections at the RF output and to withstand an accidental reverse DC bias.

Key Features

Feature	Advantages
2W output power @ 3dB compression across 700-2700MHz bandwidth	High power output across broad frequency range supports a wide array of applications.
High Gain, 33 dB typ., good flatness ± 1.2 dB typ. from 800-2300MHz	High, flat gain across entire operating bandwidth for predictable performance and signal level strength. Ideal for broadband or multi-band applications.
High IP3, +39.5 dBm typ.	Provides enhanced linearity over broad frequency range under high signal conditions.
Internal open and short protection circuitry	Antenna mismatches or damaged output cables will not cause the damage of amplifier
Unconditionally stable	No risk of damage to other components from impedance mismatch or internal oscillations. Eliminate the need for any compensating network.

1. All specifications are for a single input CW Signal. At nominal output load, 15V nominal supply voltage. An open or short load is not recommended, potentially can cause damage.

2. Measured with 2 tones, 1 MHz apart, +10dBm/tone.

▲ Heat sink not included. Alternative heat sinking and heat removal must be provided by the user to limit maximum base-plate temperature to 85°C, in order to ensure proper performance. For reference, this requires thermal resistance of user's external heat sink to be 4°C/W max.
